

A higher level of detail together with high flying performance are goals for this spiffed up version of original MSFS Baron. As Baron 58TC it goes easy as a separate aircraft into your FS library. Including a special livery of the private HelloWear aerosport plane of Austrian/American based Sportswear group. **Powerplants are 2 Continental IO-550 air cooled, six cylinder, horizontally opposed, turbo normalized, intercooled engines, developing 300hp each, with GAMI injectors for an ultrasmooth running engine, high-performance engine!** The TORNADO ALLEY TURBO NORMALIZER ensures that you obtain sealevel performance all the way up to 25,000 ft. "Turbo normalized engines differ from traditional turbo charged engines in that they do not boost at sealevel but progressively adds boost as aircraft gains altitude. This means that the system maintains sealevel performance up to ceiling, but doesn't suffer the risk of overboost, or increased internal pressures associated with normal turbo systems. Seems incredible but check out yourself!:)

**ADDITIONAL N-NUMBER N29TT only by request.**
